

Crear cuenta de desarrollador en twitter

- 0) Crearse una cuenta de Twitter si no tienen.
- 1) Vayan a la siguiente pagina y hagan click en "Apply for a developer account"
<https://developer.twitter.com/en/apply-for-access>
- 2) Para poder avanzar van a tener que agregar un número de teléfono para su cuenta de Twitter y verificarlo a través de un código de 6 dígitos que les va a llegar por SMS.
- 3) Elijan una cuenta de **estudiante**. Les van a hacer una serie de preguntas (en *cursiva*) acerca de cómo piensan usar la cuenta de desarrollador y los datos, y les sugerimos las siguientes respuestas para cada una (en **negrita**):
 - a) *In English, please describe how you plan to use Twitter data and/or APIs. For students and teachers, please include the name of the school, the name of the instructor and the course number (if available). The more detailed the response, the easier it is to review and approve. (Must be 200 characters or longer)* **I am attending a course about Big Data using Python programming at "Universidad Nacional de La Plata". The instructors' names are Rodrigo Bonazzola, Belén Michel. We plan to utilize Twitter API as an example of an API to be used from Python.**
 - b) *Are you planning to analyze Twitter data? Yes.*
Please describe how you will analyze data including any analysis of Tweets or Twitter users. (100 characters or longer)
**At the python course we will practice using an API and we will do a sentiment analysis similar to this example:
<https://developer.twitter.com/en/docs/tutorials/how-to-analyze-the-sentiment-of-your-own-tweets>**
 - c) *Will your app use Tweet, Retweet, like, follow or Direct Message functionality? (100 characters or longer)*
I will only use the text of the tweets for the sentiment analysis
 - d) *Do you plan to display Tweets or aggregate data about Twitter content outside of Twitter? No, the results of the exercise will only be shared with the instructors of the course*
 - e) *Will your product, service or analysis make Twitter content or derived information available to a government entity? No, the results of the exercise will only be shared with the instructors of the course*
- 4) Una vez que sus cuentas sean autorizadas, revisen en su dashboard the Twitter que nivel de acceso tienen. Para la clase necesitarán nivel "elevated". Si tienen "essential", en este [link encontrarán como subir de nivel](#).

Si llegarán a recibir un correo solicitando mayor información pueden responder lo siguiente:

- a) A list of the government or public sector entities that will have access to Twitter content, or information derived from Twitter content, under this use case.

No government or public sector entities will have access to Twitter content, or information derived from Twitter content. The results of the exercise will only be shared with the instructor of the course. I am taking this course at the university: “Universidad Nacional de La Plata”.

- b) The specific use cases of your product or service by government or public sector entities.

I will be performing a sentiment analysis similar to this example:

<https://developer.twitter.com/en/docs/tutorials/how-to-analyze-the-sentiment-of-your-own-tweets>. It will not be shared with the government or public sector entities.

- c) The core use case, intent, or business purpose for your use of the Twitter APIs.
—Please note, “business purpose” in this context includes uses not necessarily connected to a commercial business. We require information about the problem, user story, or the overall goal your use of Twitter content is intended to address.
—If you are a student, learning to code, or just getting started with the Twitter APIs, please provide details about potential projects, or areas of focus.

I am a student attending a course about Python programming at Universidad Nacional de La Plata. The instructors’ told me to create a developer account for an exercise of sentiment analysis. This exercise will be useful to learn how to manipulate strings (use regular expressions, clean the text and understand its polarity and subjectivity), and to work with an API (the use of keys and tokens). I don’t have further projects in mind.

Si quieren pueden incluir sus áreas de interés para futuros proyectos.

- d) If you intend to analyze Tweets, Twitter users, or their content, please share details about the analyses you plan to conduct, and the methods or techniques.
—Note that “analyze” in this context includes any form of processing performed on Twitter content. Please provide as detailed and exhaustive an explanation as possible of your intended use case.

**In this course we will analyze the sentiment of some tweets before and after an important event. We were told that It will be something similar to this:
<https://developer.twitter.com/en/docs/tutorials/how-to-analyze-the-sentiment-of-your-own-tweets>**

- e) If your use involves Tweeting, Retweeting, or liking content, share how you will interact with Twitter users or their content.

No, it won’t involve Tweeting, Retweeting, or liking content.

- f) If you’ll display Twitter content off of Twitter, please explain how, and where, Tweets and Twitter content will be displayed to users of your product or service, including whether Tweets and Twitter content will be displayed at row level, or aggregated.

To provide the information, please respond to this email. Where possible, please share links to illustrations, or sample work products.

Twitter content won't be displayed. The analysis will be stored in a private GitHub repository shared only with the instructors for grading purposes.
