PovcalNet: an online analysis tool for global poverty monitoring

PovcalNet is an interactive computational tool that allows you to replicate the calculations made by the World Bank's researchers in estimating the extent of absolute poverty in the world. *PovcalNet* also allows you to calculate the poverty measures under different assumptions and to assemble the estimates using alternative country groupings or for any set of individual countries of the user's choosing. *PovcalNet* is self-contained; it has reliable built-in software that quickly does the relevant calculations for you from the built-in database.

In October 2017, the World Bank released estimates of global poverty from 1981 to 2013 based on 2011 PPP. The new poverty estimates combine Purchasing Power Parity (PPP) exchange rates for household consumption from the 2011 International Comparison Program with data from more than one thousand five hundred household surveys across 163 countries in the world, including 25 other high income countries. Over two million randomly sampled households were interviewed for the 2013 estimate, representing 85 percent of the population of the whole world.

PovcalNet is the source of, and allows users to replicate, the Bank's official global, regional and internationally comparable country level poverty estimates published in the World Development Indicators, as well as the shared prosperity indices reported in the *Poverty and Shared Prosperity* report. If you would like to duplicate the World Bank's regional poverty estimates please click the first button; or go to the second button to form your own group of countries. *PovcalNet* uses unit-record data whenever possible. For other cases, grouped distributions are used. New survey data become available to us on a continuous basis and these will be added to *PovcalNet* in regular updates.

PovcalNet is a product of the World Bank's research department, the Development Research Group. This version of the *PovcalNet* software was designed by Qinghua Zhao. The global poverty monitoring database is managed by Shaohua Chen and Prem Sangraula, with assistance from Christoph Lakner and Kihoon Lee. Assembly of these data is undertaken under the auspices of the Global Poverty Working Group which brings together the *PovcalNet* team and country- and regional-level counterparts in the World Bank's Poverty and Equity Global Practice, and which compiles country level data and assesses these for international comparability. Overall guidance is provided by Asli Demirgüç-Kunt, Director of Research, Development Economics, and Francisco H. G. Ferreira, Senior Advisor in the Poverty and Inequality team of the Research Department. The founder of *PovcalNet* and former Director of Research, Martin Ravallion, provides continued oversight of the methodology adopted in *PovcalNet*. A great many colleagues at the World Bank have helped the team in obtaining the necessary data for

World Bank's regional aggregation

- Info de más de 850 encuestas nacionales
- Casi 130 países (+ 90% de la población de países en desarrollo)
- Período 1980-2015

SEDLAC

SOCIO-ECONOMIC DATABASE FOR LATIN AMERICA AND THE CARIBBEAN

This database includes statistics on poverty and other distributional and social variables from all Latin American and some Caribbean countries, based on microdata from households surveys.

Desigualdad por región

Source: Gasparini and Gluzmann (2013) based on microdata from the Gallup World Poll 2006.

Desigualdad por región

Desigualdad global en una región puede dividirse en:

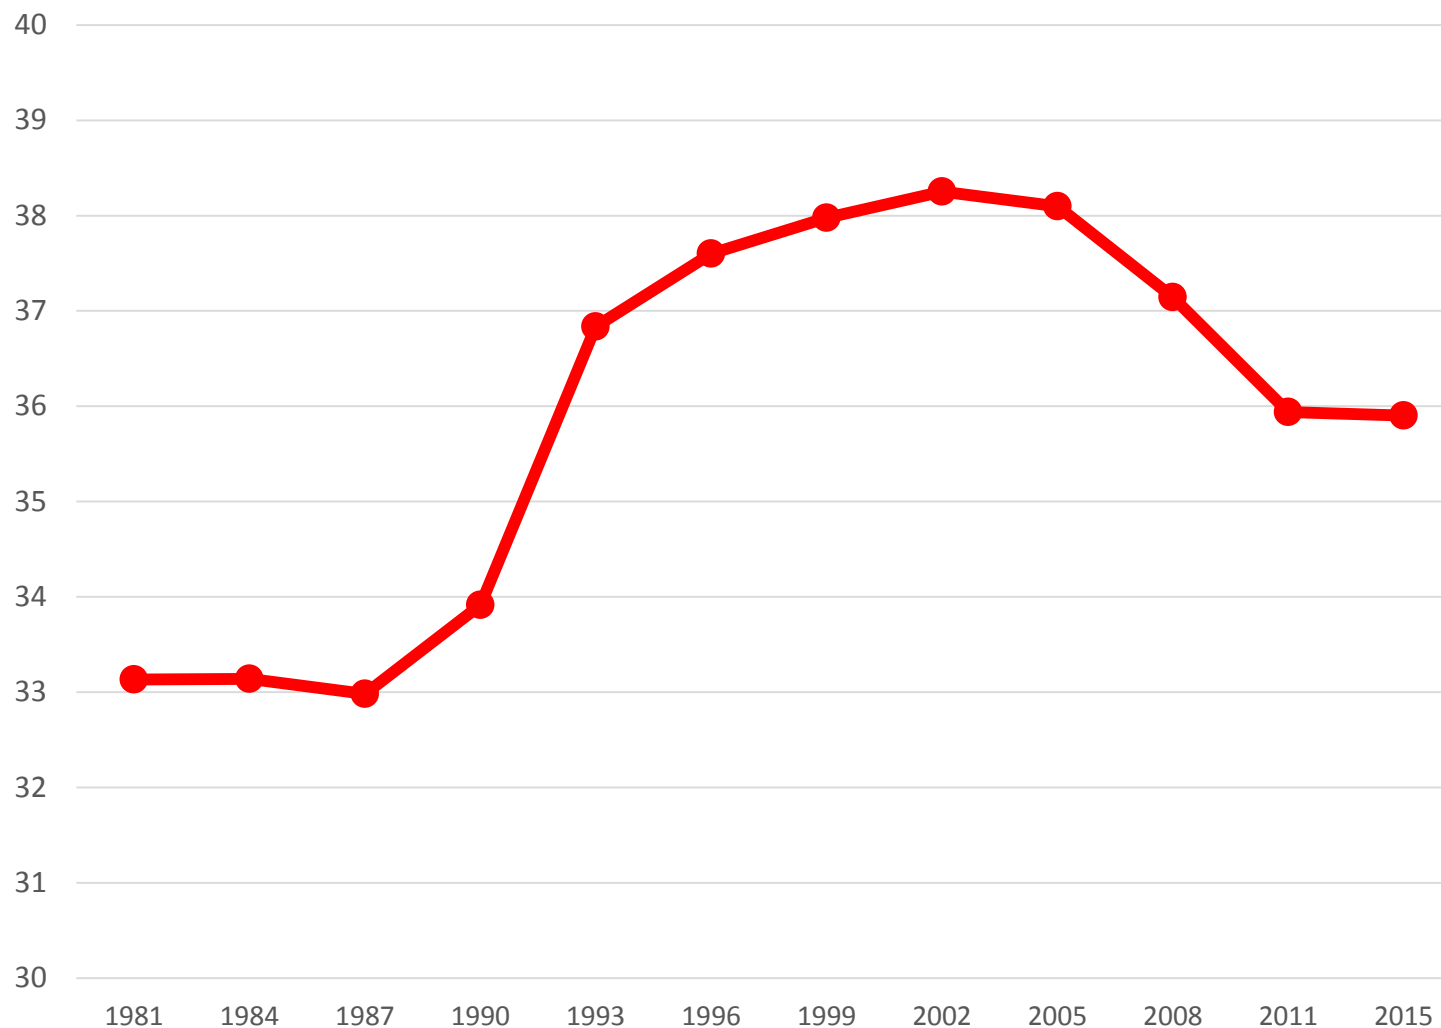

- Desigualdad *within*
- Desigualdad *between*
- Contribución del componente between:
 - 8% en América Latina
 - 26% en Europa del Este y Asia Central
 - 32% en Asia del Este
 - 47% en el Caribe

Desigualdad en el mundo en desarrollo

Proportion of countries classified in groups according to the change in the Gini coefficient

	1981-1990	1990-2002	2002-2011	2011-2015
Fall	33.3	30.6	64.4	33.3
No change	15.2	11.8	11.1	33.3
Increase	51.5	57.6	24.4	33.3
Total	100	100	100	100

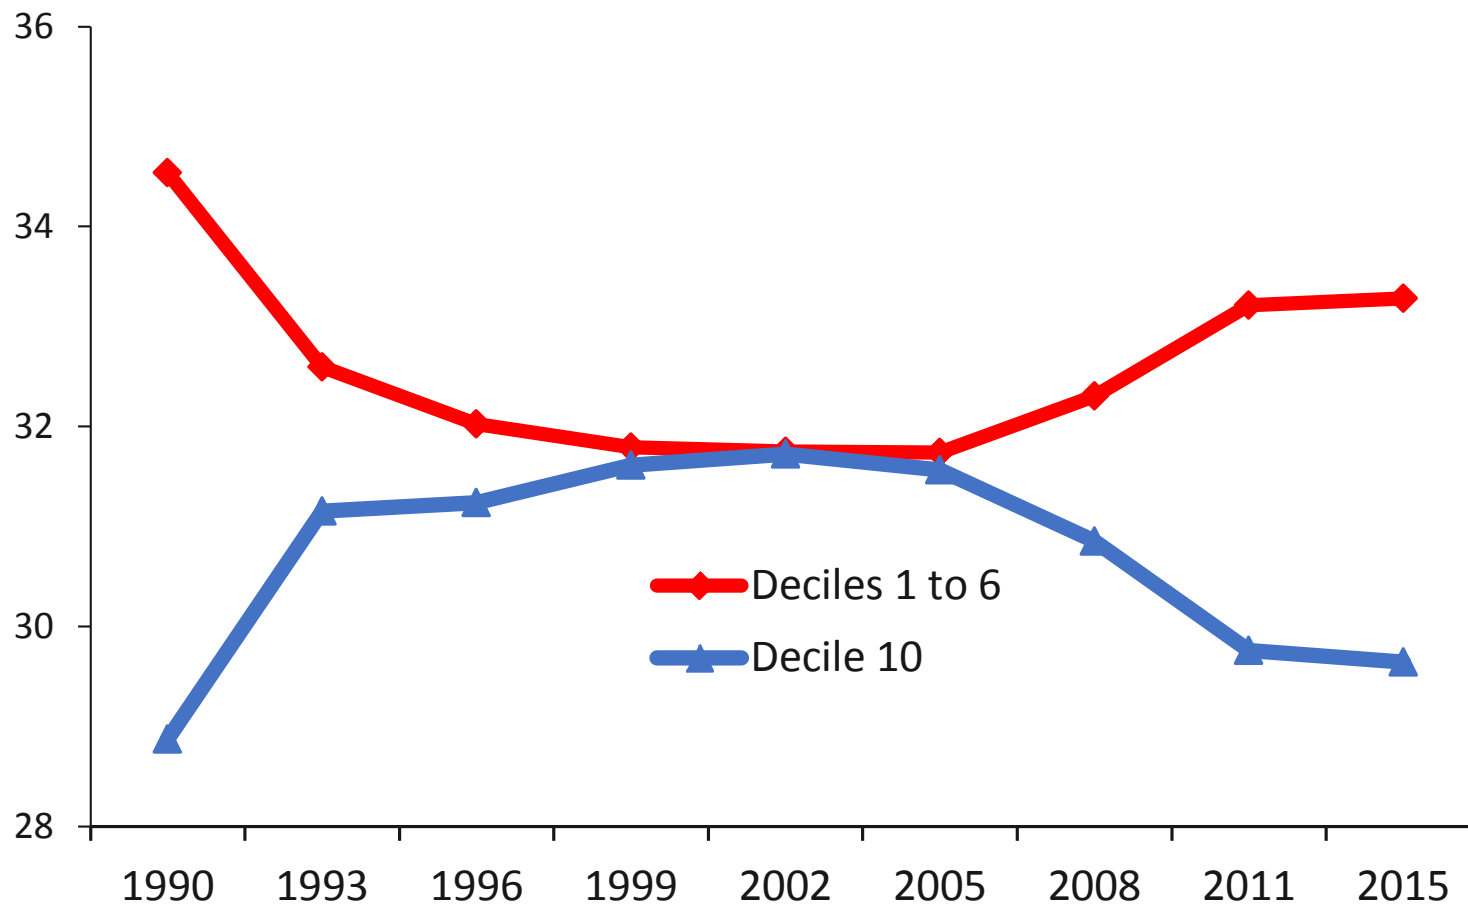

Source: Gasparini et al. (2018) based on Povcalnet.

Note: “Fall” includes countries where the Gini fell more than 2.5% in the period, “Increase” include countries where the Gini rose more than 2.5%, “No change” includes countries where the Gini changed less than 2.5%, “No information” includes countries without two independent observations in each period.

TABLE 1.1. Global top 1% shares in global income and global wealth

<i>Estimate of income or wealth share</i>	<i>Around 2000</i>	<i>Around 2010</i>
Top 1% share in global income based on household surveys alone ^a	14.5	15.7
Top 1% share in global income based on surveys and adjustment for underreporting ^a	29	28
Top 1% share in global income based on surveys, adjustment for underreporting, and adjustment for hidden wealth ^b	—	29
Top 1% share in global wealth ^c	32	46

Note: Top 1% for wealth refers to the richest 1% of adult individuals.

^aFrom Lakner and Milanovic (2013); methodology of imputation explained in the paper.

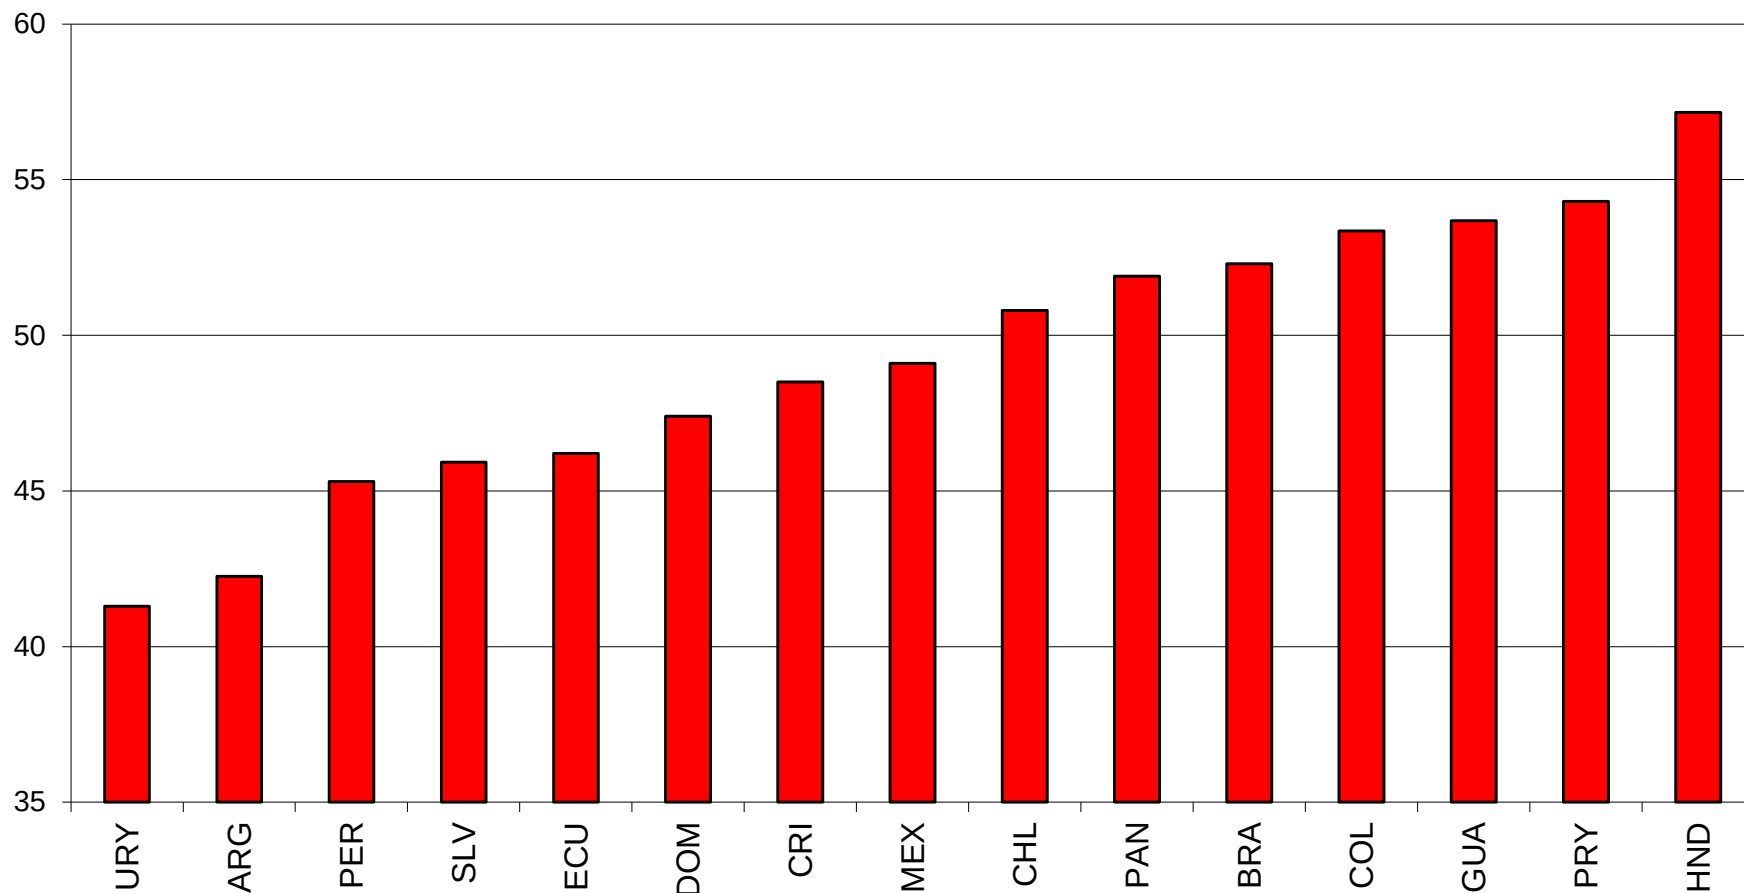

^bAdditional data from Zucman (2013).

^cFor 2000 from Davies et al. (2011, 244); for 2013 from Credit Suisse Research Institute (2013, 10, table 1).

- **Remuneración al Trabajo Asalariado (RTA):** retribuciones de todo trabajador en relación de dependencia, registrado o no, más las contribuciones sociales de los empleadores.
- **Excedente Bruto de la Explotación:** Engloba la sumatoria de las retribuciones a los activos de las empresas constituidas como sociedades (utilidades, intereses, renta patrimonial, etc.) Incluye la renta por el uso de vivienda propia y las amortizaciones del capital.
- **Ingreso Bruto Mixto:** Esta compuesto por el saldo contable o excedente no contemplado en ninguna de las dos componentes anteriores. Representa los ingresos de las empresas no constituida en sociedades, de las propiedades de los grupos familiares, de los trabajadores autónomos y todo quién no se desempeñe en relación de dependencia. Incluye la retribución mixta tanto de trabajo como capital.

Distribución funcional

Cuadro 1. Cuenta de generación del ingreso. Año 2016 y primer trimestre de 2017

Componentes de Valor Agregado Bruto a precios básicos	Año 2016				Total 2016	Año 2017
	1º trim.	2º trim.	3º trim.	4º trim.		1º trim.
Millones de pesos						
Valor agregado bruto a precios básicos	5.775.119	7.026.634	6.902.525	7.428.484	6.783.190	7.479.718
Remuneración al trabajo asalariado	3.152.934	3.382.892	3.635.720	3.933.369	3.526.229	4.159.451
Ingreso bruto mixto	725.037	740.360	753.575	856.151	768.781	916.008
Impuestos netos de subsidios a la actividad	– 114.786	– 237.472	– 303.977	– 320.594	– 244.207	– 212.023
Excedente de explotación bruto	2.011.933	3.140.855	2.817.206	2.959.558	2.732.388	2.616.281
Estructura %						
Valor agregado bruto a precios básicos	100,0	100,0	100,0	100,0	100,0	100,0
Remuneración al trabajo asalariado	54,6	48,1	52,7	52,9	52,0	55,6
Ingreso bruto mixto	12,6	10,5	10,9	11,5	11,3	12,2
Impuestos netos de subsidios a la actividad	– 2,0	– 3,4	– 4,4	– 4,3	– 3,6	– 2,8
Excedente de explotación bruto	34,8	44,7	40,8	39,8	40,3	35,0

Nota: Los valores trimestrales están anualizados y el aguinaldo se devenga mensualmente.
